

NRC Perspectives on Advanced Sensors for Nuclear

Raj Iyengar, Chris Ulmer

Division of Engineering
Office of Nuclear Regulatory Research
U.S. Nuclear Regulatory Commission

October 2022

We Make **SAFE** Use of Nuclear Technology **POSSIBLE**

Values

Innovation and
Transformation

Driver for Change

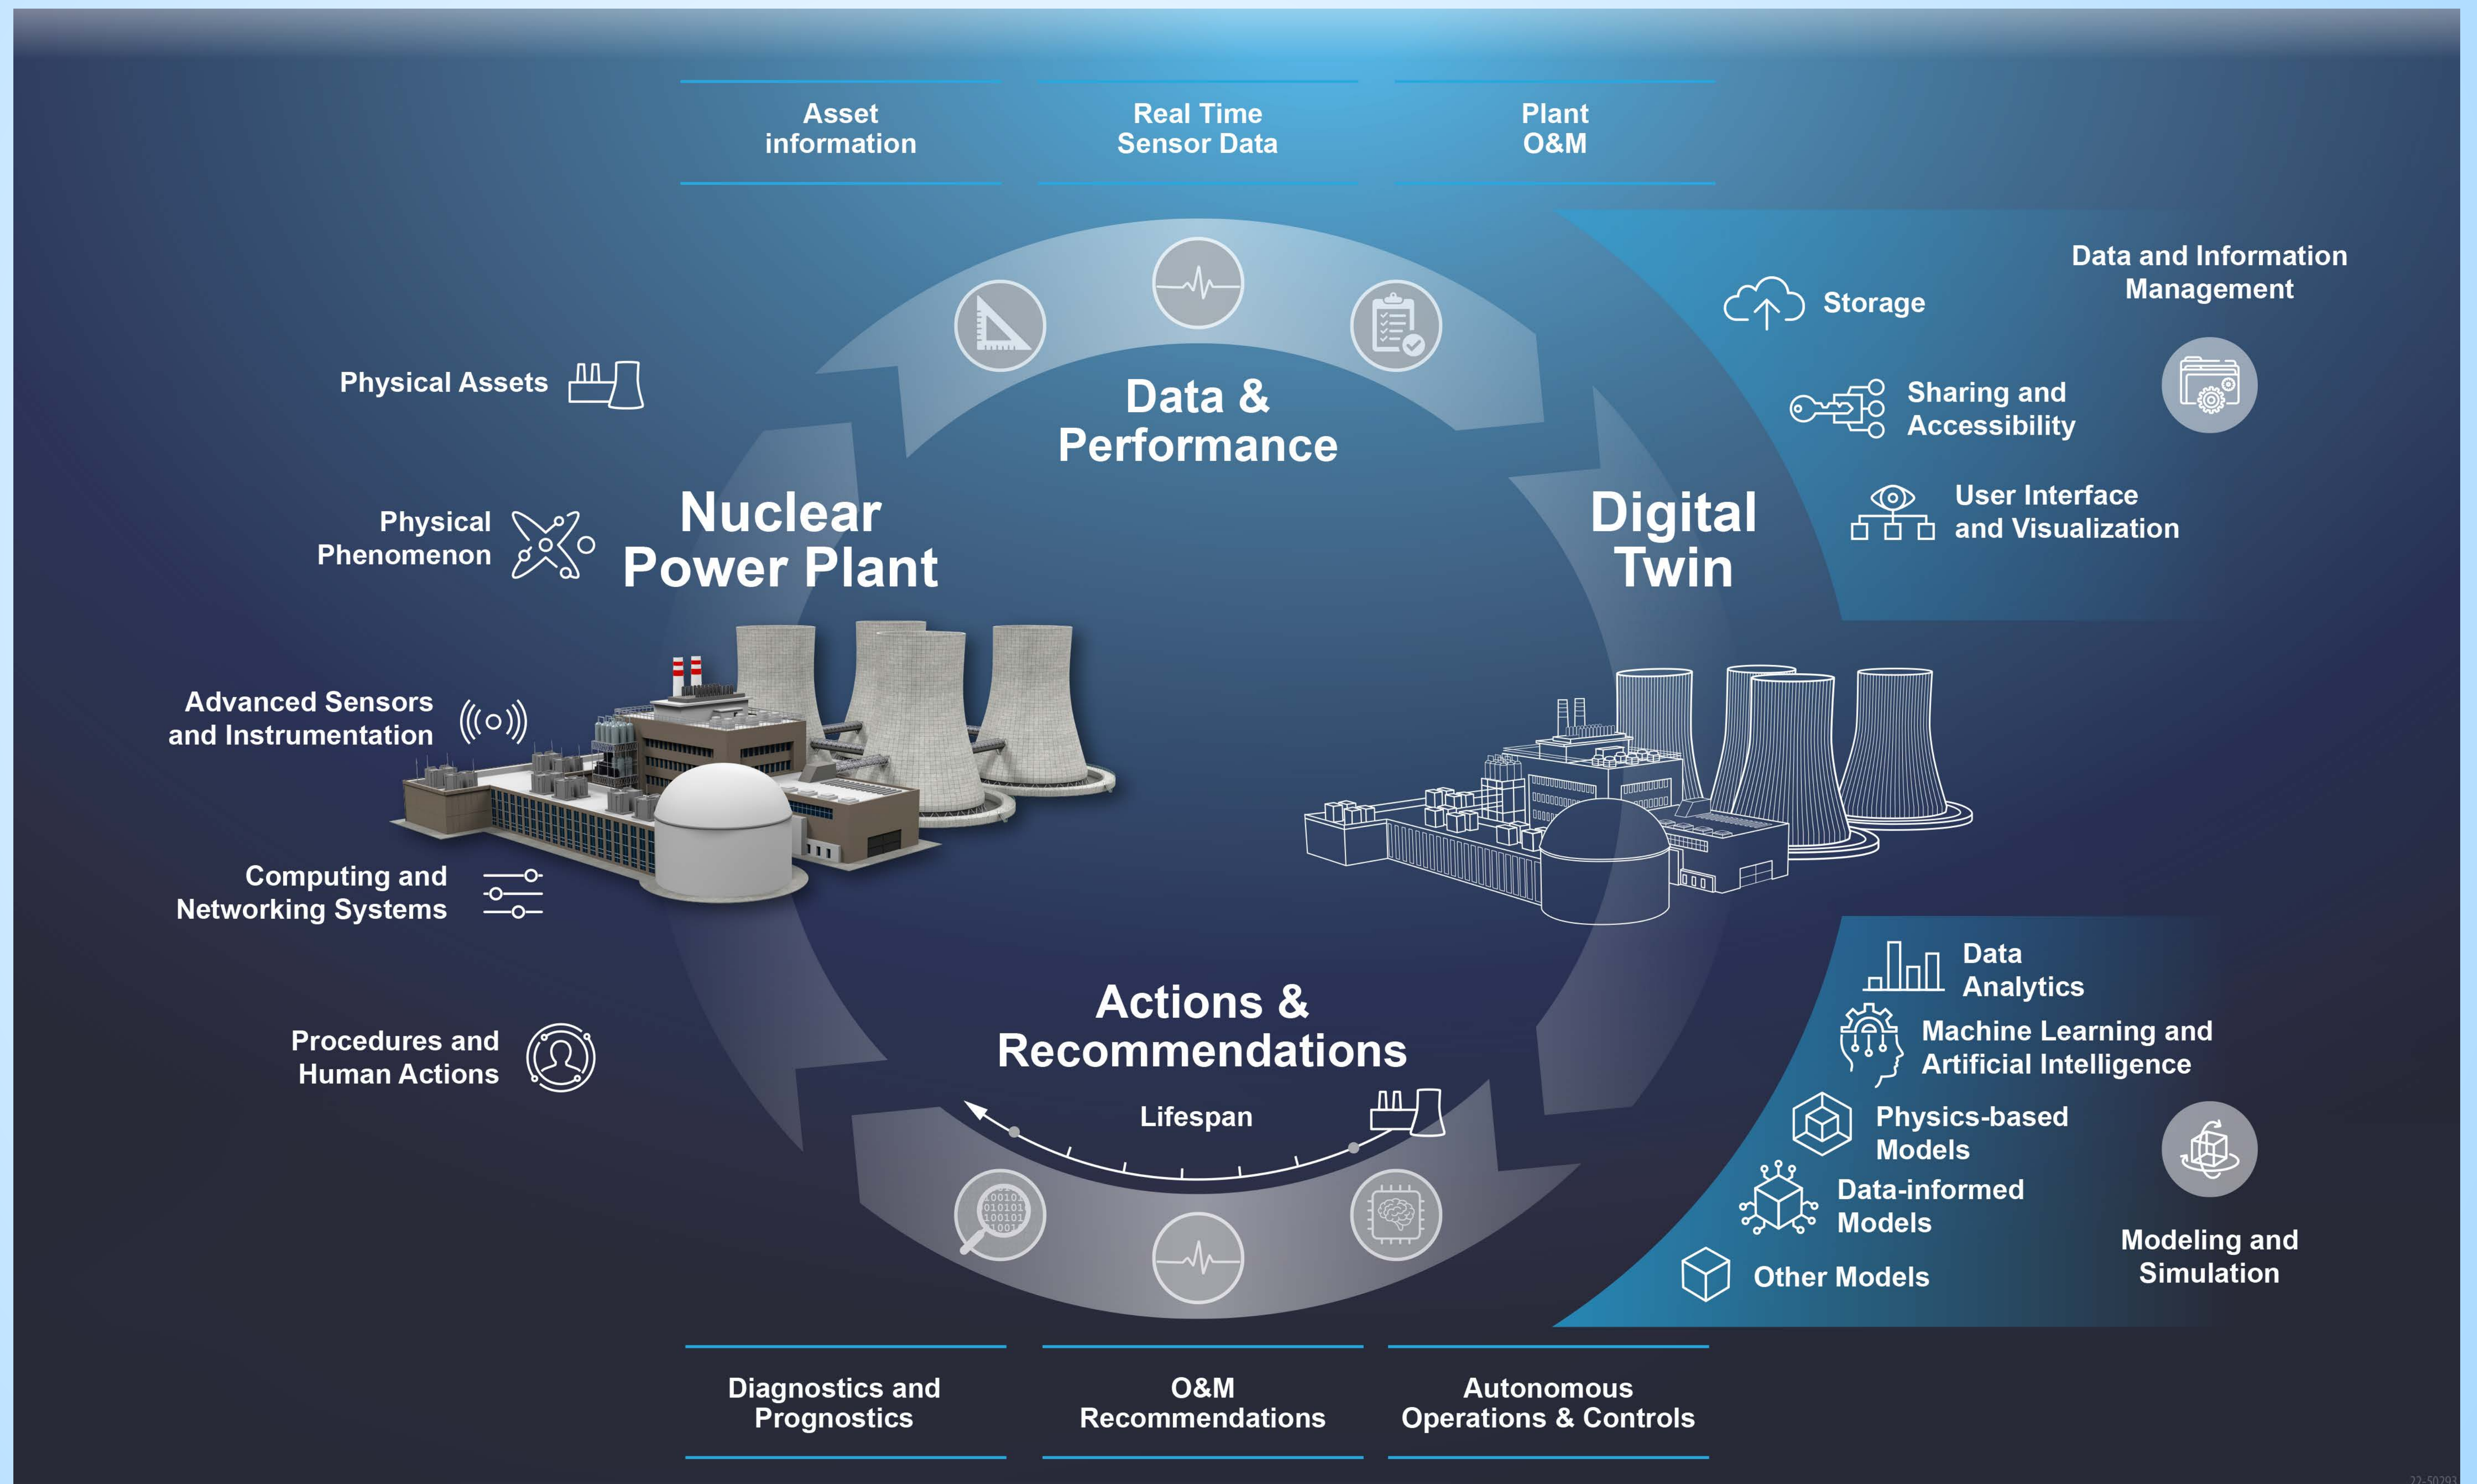

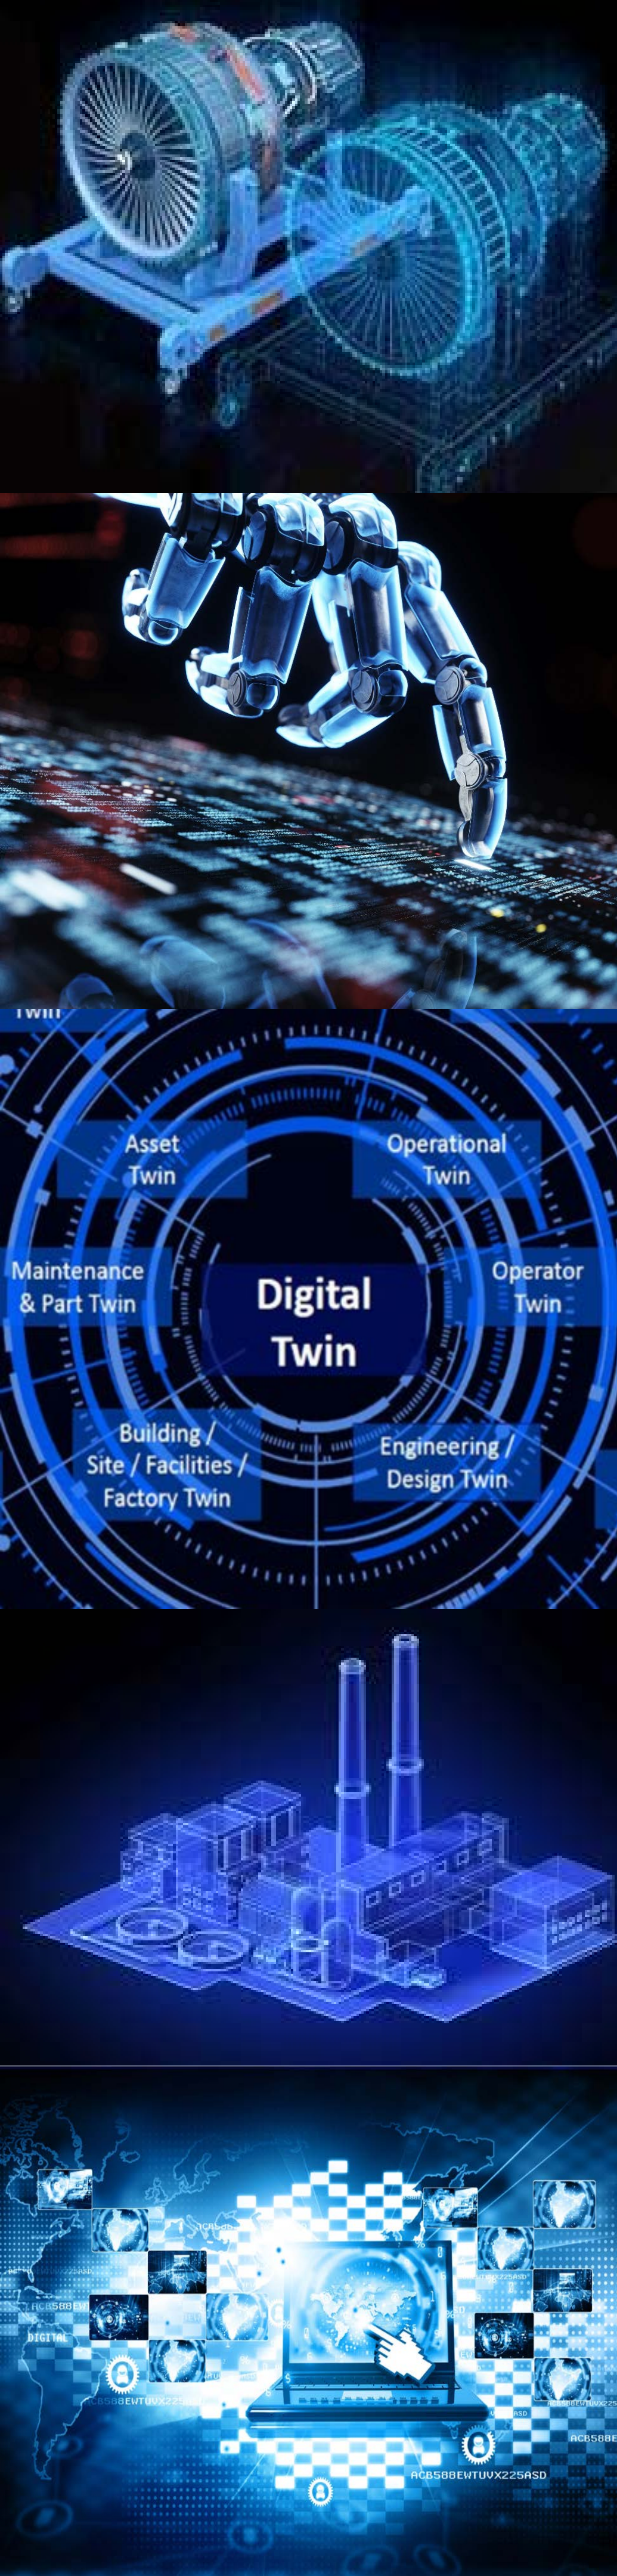

Advanced technologies offer new opportunities

- **Enhance Reliability**
- **Improve Efficiency**
- **Reduce Uncertainties**

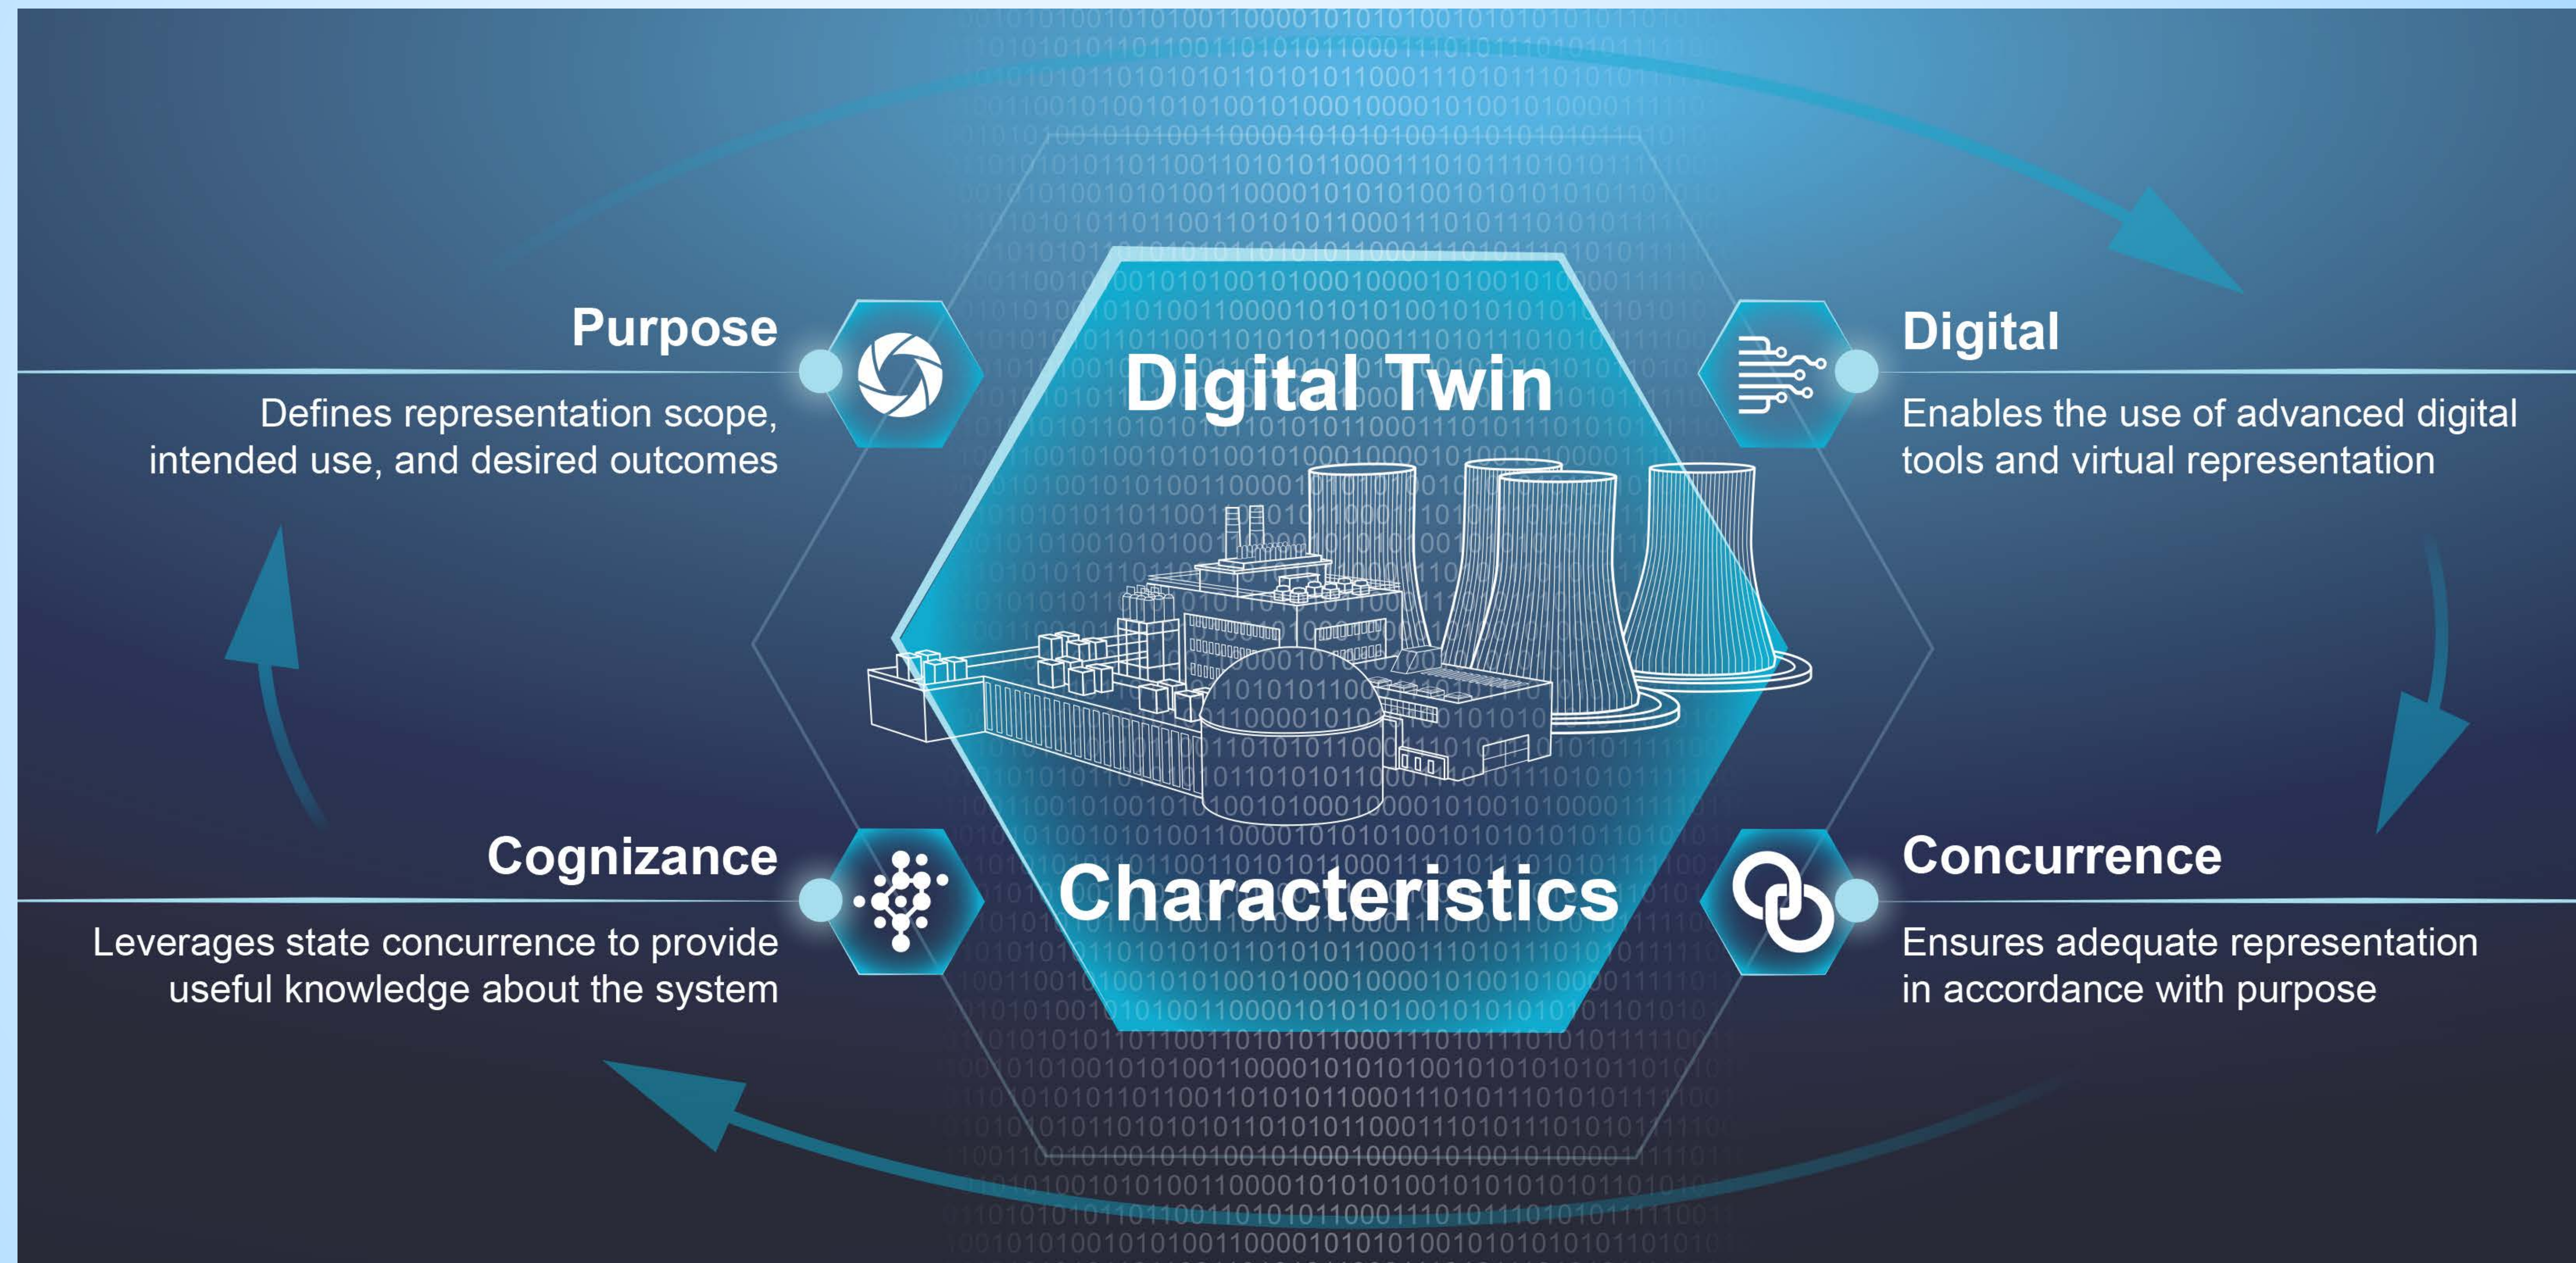

Digital Innovations could impact each these areas

We Are Keeping Pace with Technological Innovations and Reducing Barriers to Enable the Safe and Secure Use of Technological Innovations in Nuclear Facilities

What is a Digital Twin?

Digital Twin Characteristics

Technical Challenges & Gaps

Enabling Technology

Key Challenge

Advanced Sensors & Instrumentation (ASI)	Building adequate ASI infrastructure
Data and Information Management	Developing user interfaces for data and information
Data Analytics	Implementing scalable, integrable data analytics
Artificial Intelligence (AI)/ Machine Learning (ML)	Establishing AI/ML trustworthiness and explainability
Modeling and Simulation	Constructing real-time, high-fidelity physics-based simulations
	Developing real-time, data-informed models
	Verifying and validating integrated models

Advanced Reactors

Selected Research Activities

Molten Salt Chemistry

Molten Salt
Compatibility/Corrosion

Modeling & Simulation

Molten Salt processing
for metallic and molten
salt fuels

Reliability of Components & Risk Reduction

Component
Performance/Integrity

Performance monitoring

Surveillance programs

Advanced sensors

Off-gas control

Fuel Cycle

Graphite waste and
disposal

Technical challenges:
enrichment, fabrication
and transportation of
HALEU fuel

Storage systems for
waste streams from
MSRs

ASI Enabling Technologies

Advances are now enabling longer-lived sensors capable of more precise measurements in regions previously difficult to instrument

advanced
manufacturing

advanced
materials

advanced
batteries

edge and
cloud
computing

radiation-
hardened
sensors

embedded
sensors

nanotechnology

power harvesting

optical sensors

multi-modal
sensors

ASI Selected Applications

Materials Degradation and Component Performance

- High-temperature and harsh environments
- Flux and Radiation
- Performance monitoring

Mechanical/Vibration

- Motor-pump systems
- Flow induced vibration of mechanical systems

Chemistry

- Corrosion behavior and redox potential in MSRs
- Off-gas control
- Waste streams
- Electro chemical processing

ASI Challenges and Gaps

Design

- Performance and reliability-based design
- Environmental resistance
- Nano-sensors for in-core requirements
- Multimodal sensors

Operating Environment

- Qualification process and data
- Performance and reliability

Sensor Communication

- Addressing wireless cybersecurity concerns
- Qualifying heterogeneous, multi-band wireless networks

Power Supply

- Addressing limitations of cabling and battery power
- Developing power harvesting for self-powered sensors

Thank You

These activities were supported by multiple NRC offices including:

- Nuclear Regulatory Research
- Nuclear Reactor Regulation
- Nuclear Security and Incident Response
- Nuclear Material Safety and Safeguards
